Agentic AI Procurement Agent

From natural language to purchase
order in seconds, not days.

ENTERPRISE SALES BRIEFING | 2026

BUYER INPUT • NL
"300 m Cat6 cable, Mumbai, 5 days"

PURCHASE ORDER
PO-2026-4821 • ₹287,400
• CONFIRMED

— THE PROBLEM

Enterprise procurement is broken.

Corporate purchasing takes between **3 and 30 business days** — not from lack of budget, but from manual processes and closed systems.

3–30 days

Standard procurement cycle time

Months

Every new bilateral supplier integration

Manual

Data re-entered in every system: procurement, finance, ERP

— THE CURRENT REALITY

SAP Ariba, Coupa, and Oracle are not enough.

Existing platforms digitized the process but did not transform it. They remain closed ecosystems, with supplier lock-in and no learning.

TRADITIONAL PLATFORMS

Closed by design

- Every supplier requires months of bilateral integration
- Buyers see only pre-agreed suppliers — the pool is fixed
- Manual negotiation via emails and phone calls
- No institutional memory across purchases

WHAT THEY PROMISE

"End-to-end automation"

- Digital catalogs and workflow orchestration
- Vendor-managed supplier onboarding
- Analytics and spend dashboards
- SOX-ready audit exports

THE REALITY

Locked in, learning nothing

- Onboarding a new supplier = new IT project
- Cycles unchanged; only the buttons moved online
- Every purchase starts from a blank slate
- No leverage on price beyond human negotiation

— OUR SOLUTION

One prompt. One purchase order. Seconds.

An AI agent that converts free text into a confirmed PO — multi-supplier discovery, ML scoring, autonomous negotiation, SOX 404 compliance — on the open **Beckn Protocol v2.0.0**.

- ✓ **Natural language:** "300 m Cat6 cable, Mumbai, 5 days, budget 15K"
- ✓ **Real-time supplier discovery** — no bilateral IT agreements required
- ✓ **Compares, negotiates, and commits** automatically with full audit trail
- ✓ **Vendor-neutral ERP** — SAP S/4HANA, Oracle ERP Cloud, Microsoft Dynamics

CYCLE TIME

42 seconds

From text to purchase order in 5 steps.

The agent orchestrates the full **Beckn v2.0.0 lifecycle** — discover, select, init, confirm, status — automatically and auditably.

Total wall-clock time on routine autonomous flows: **~45 seconds**. Every step that previously required human intervention is now automatic — and immutably logged for SOX 404.

Seven enterprise capabilities, one agent.

From intent to fulfillment, every critical procurement function is covered, governed, and audited.

Local AI

qwen3 LLM runs on-device. Sensitive procurement data never leaves your infrastructure.

DATA SOVEREIGNTY

Open Protocol

Beckn v2.0.0 with ED25519-signed transactions. Any Beckn supplier available on day one.

NO LOCK-IN

Autonomous Negotiation

LangGraph engine with a hard 20% discount cap enforced at three governance layers.

POLICY-SAFE

ML Scoring - RankNet

Pairwise ranking on price, delivery speed, and supplier risk. MLflow-managed with weekly drift detection.

CONTINUOUSLY LEARNING

Agent Memory

pgvector semantic search over past confirmed orders. Time-decayed loyalty bonus rewards reliable suppliers.

INSTITUTIONAL KNOWLEDGE

SOX 404 Audit Trail

9 event types, 7-year retention, JSONB reasoning payload. Audit-ready from day one — no BI project needed.

COMPLIANCE BUILT-IN

Less time. Lower costs. More control.

The impact is not incremental — it is transformational.

What no traditional platform can do.

The difference isn't isolated features — it's open architecture, continuous learning, and multi-layer governance.

CAPABILITY	TRADITIONAL PLATFORMS			AGENTIC AI PROCUREMENT
Open protocol · no bilateral agreements			✗ Closed ecosystem	✓ Any Beckn supplier, day one
LLM			✗ Without LLM	✓ LLM available
Governed autonomy · 3-layer guardrails			✗ Manual workflows only	✓ Model + rules + wire schema
Supplier memory · time-decayed loyalty			✗ No learning across purchases	✓ pgvector + 90-day decay
Vendor-neutral ERP · same software everywhere			✗ Custom rewrite per ERP	✓ SAP · Oracle · Microsoft

— ARCHITECTURE

Enterprise architecture by design.

18 microservices on cloud-native infrastructure. Production-proven stack, Kubernetes-ready from day one.

— USE CASES IN PRODUCTION

Real procurement. Real results.

The agent adapts its execution mode to each purchase's risk profile — from full autonomy on commodities to human review on medical or IT-strategic.

AUTONOMOUS • COMMODITY

Standard stationery

Request → confirmed order fully automated. Up to 10% negotiation cap applied.

5–7 days → ~45 sec

ADVISORY • IT STRATEGIC

Corporate IT equipment

Buyer selects from ML ranking; manager approves in under 5 minutes. No automated discount.

3–4 weeks → <5 min

CPO BENCHMARKING

Live market scan

Contracted price vs best available Beckn market offer, in real time. Renegotiation intelligence on demand.

Quarterly → real time

KPIs available from day one.

The real-time analytics dashboard measures direct impact on spend, savings, and cycle times — no separate BI project required.

DISTINCT BPPS • BECKN NETWORK

Designed to grow with your business.

Microservices on Kubernetes enable independent horizontal scaling — add capacity where you need it, without touching the core.

● `Kubernetes` • `Helm` • `ArgoCD` ● `Redis (session state)` ● `Kafka (event streaming)`

- **Kubernetes-ready** — parameterized Helm charts + ArgoCD GitOps for zero-downtime deployment
- **Multi-network Beckn** — concurrent discovery with per-network circuit breakers and geo-proximity dedup
- **Multi-replica** — orchestrator scales horizontally with session state externalized to Redis
- **Gradual adoption** — start with one category; scale to the enterprise without re-architecture

From MVP to enterprise platform.

Four phases with clear deliverables. Phases 1–3 are **delivered and running in production**.

ONE IDEA. ALL THE VALUE.

97%

reduction in procurement cycle time – from
days to seconds, without giving up governance.

01

Cycles: 3–30 days → seconds

02

Suppliers: unlimited via open Beckn
protocol — no bilateral agreements

03

Compliance: SOX 404 + GDPR + IT Act
2000 from day one, zero extra projects

04

Differentiator: local AI that learns,
negotiates within policy, and integrates
with any ERP
